# OTTOSTUMM distinctive steel window systems

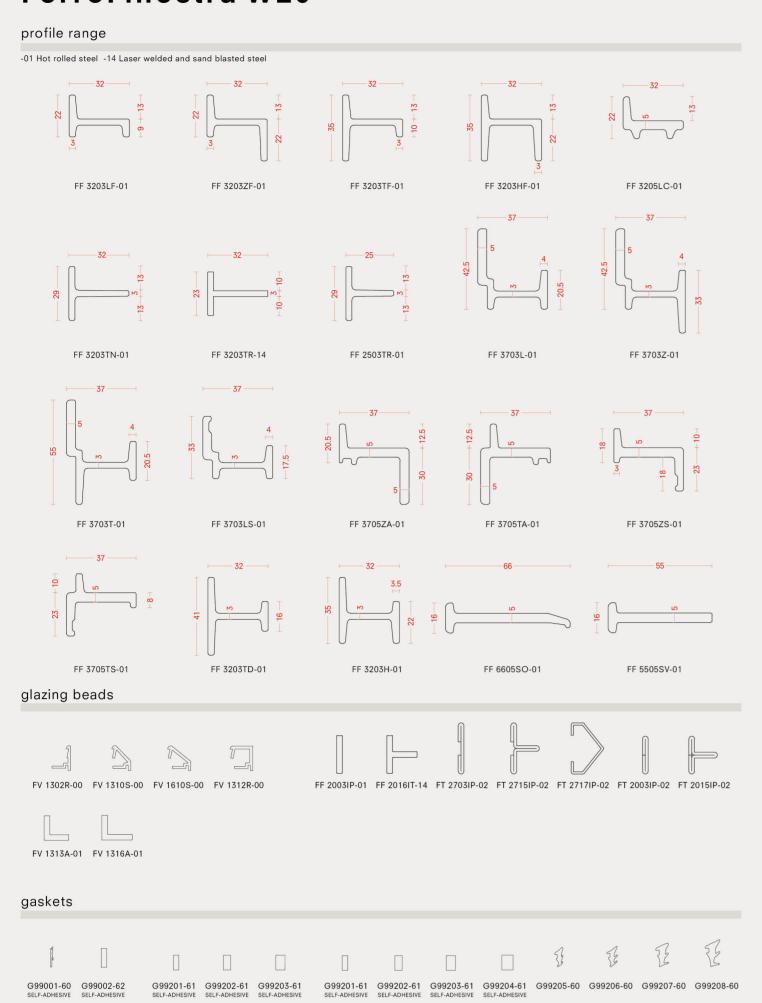

Our mission is to support architects, planners and designers with appealing steel fenestration systems, which offer the possibility to use windows and doors with distinctive visual qualities in historic buildings and contemporary architecture. Depending on the climatic environment, national regulations on thermal performance and/or national heritage guidelines, the architect can choose among a large variety of different system and designs to match the requested architectural style.

We promote beauty in architecture and provide the ingredients for our customers to continue to manufacture works of art in a changing world with changing needs.
